TKIP (Temporal Key Integrity Protocol) provides an encryption algorithm that is mandatory for US wireless networks for use with WPA, but the algorithm is not supported by older wireless cards. This data can be used to determine if a TKIP algorithm is supported by the wireless card or not. You will see that this is very important because if a wireless card does not support TKIP that means it will not be able to connect to the internet. In this post I will show you a Windows tool I wrote using the Aircrack-ng toolchain for cracking a TKIP WPA2 WPA network.
